

MICROSHIELD 360 PROTECTION™

PROTECTS THE AIRCRAFT CABIN FROM
GERMS AND VIRUSES

MicroShield 360™ is a sustainable colorless, odorless and non-toxic formulation. It dries in minutes, and once dry, adheres permanently to the surface. Unlike cleaners and disinfectants, which use poisons to kill germs, MicroShield 360™ deploys a mechanical kill. This non-leaching technology not only ensures a long-lasting effect, but also prevents microbial residues from sprays and cloths. It involves a multi-step application process that kills pathogens on contact, as well as preventing them from living on treated surfaces in the future.

AIRCRAFT PREPARATION

The aircraft cabin needs to be in a clean condition and therefore a standard interior cleaning is recommended up front. This service can be additionally requested at selected locations.

MICROSHIELD 360™ RENEW – KILLS ON CONTACT

A specially formulated disinfectant is applied to all surfaces and allowed to air dry. This preps the surface for the next step.

MICROSHIELD 360™ ANTIMICROBIAL – PREVENTIVE PROTECTION

A patented coating formula with a bio static finish that adheres to surfaces and prevents pathogens long-term.

| | |
|-------------|---|
| PROTECTION | Applied once a year to provide lasting preventive protection |
| DURABILITY | Long-lasting residual protection |
| COST | Reduces labor and chemical costs |
| APPLICATION | Spray application coupled with polymerized coating eliminates human error |
| SAFETY | Does not use poisons, is non-toxic and FDA approved for direct contact with food surfaces |

PRODUCT CHARACTERISTICS

- EPA registered and FDA approved for direct contact with food surfaces
- Clear, colorless and odorless
- Hypoallergenic and non-toxic
- 99.9% preventive
- Non-leaching technology
- Mechanical, rather than cidal kill
- Does not allow for resistances
- Creates a permanet coating
